EDUCATION

University of California, Los Angeles (UCLA)

Los Angeles, CA | Graduating June 2025

B.S. in Computer Science

GPA: 3.78/4.0

Relevant Coursework: Data Structures and Algorithms, Computer Networks Fundamentals, Operating Systems Principles, Data Management Systems, Software Construction

WORK EXPERIENCE

Full-Stack Intern | XCare (Lake Forest, CA)

6/2022 - Present

- Utilized low code app building options to create a baseline application showcasing necessary organization and UI of potential future mobile application
- Collaborated with software engineers to develop backend infrastructure creating an MVP in Node.js and Express, while also improving frontend design in React Native under a MERN stack framework
- Conducted bug testing on iOS and Android platforms to assist development of application and ensure quality of MVP before presentation

Undergraduate Researcher | *Elegant Mind Club Lab* (Los Angeles, CA)

3/2023 - 6/2023

- Focused on improving object-detection models through real-time 3D depth perception by synchronizing drones with stereoscopic first-person view systems
- Built an experimental pipeline utilizing live video stream feed from a Tello drone into Vive VR headsets on Unity VR, ODLC software written in Python to detect objects, and a Raspberry Pi to compile data collected from motion detection cameras and the VR headset on user movements
- Yielded valuable insights into the benefits of future research and development by enhancing video quality, heightening situational awareness, and optimizing real-time ODLC processes

TECHNICAL PROJECTS

$\textbf{QED-AI (Quod Erat Demonstrandum-AI)} \mid (\underline{\text{QED GitHub}})$

4/2023 - 4/2023

• Developed a website using React, MathPix API, and ChatGPT API to devise an application allowing students to verify any math proof by inputting text and/or images of math work

MyCourse Website | (MyCourse GitHub)

9/2022 - 12/2022

 Utilized a MERN stack framework to build a website simplifying UCLA's planner system using UCLA's APIs, combining the functionality of multiple websites for selecting classes

Dynamic Dating App Simulation

1/2022 - 3/2022

• Programmed a C++ dating app simulation by implementing a Radix Tree and efficient algorithms to manage and query stored data effectively

VOLUNTEER EXPERIENCE

Volunteer Lead | Little Tokyo Service Center (Los Angeles, CA)

9/2022 - 12/2022

• Engaged with the Little Tokyo Service Center's Los Angeles afterschool program to provide mental, physical, and academic support in areas of STEM and the arts to underprivileged children

Co-Founder | *COVID-19 Senior Assistance Initiative (Lake Forest, CA)*

4/2020 - 6/2021

• Spearheaded a volunteer shopping service to deliver \$5000 worth of groceries via a functional website and phone service to seniors in Saddleback Valley and Corona during COVID pandemic

SKILLS

Programming: C++, JAVA, React, Node.js/Express, Python, HTML, CSS

Technical: MongoDB, DynamoDB, Adalo, Unity VR, Arduino, Raspberry Pi, Adobe Lightroom, SolidWorks

Operating Systems: Windows, Linux Ubuntu, Linux, MacOS

INTERESTS

Hobbies: Photography, Tennis, Music
